

SYSTEM OFFERS MOBILE CUSTOM MIXING

Since batching by weight has long been established as the most accurate and efficient method of concrete production, the manufacturer notes, its new Flow Stone mobile batch weighing system is designed to duplicate the control and accuracy of static batching plants, serving all markets for concrete, screed and mortar. Taking dry ingredients and batching plant on site, it eliminates waste from over ordering, thus suiting, most especially, fencing contractors and small concrete product operators.

Affirms Norman Opie, director, Flow Stone at Neilson Hydraulics, "It is a quick and accurate method of providing quality concrete of the right strength, available on demand, without any waste or

mess." Company-cited features of the Flow Stone model include:

- Fresh concrete is mixed on site and discharged as needed
- Cement, water and aggregates are individually batch weighed to ensure correct strength
- Batch computer stores 50 pre-programmed recipes
- Variable mixing time allows a wide selection of automatic additive and color dosing
- Batch sizes range from 200 to 800 liters
- Twin belts can carry two ingredients, enabling flexibility when producing screed or mortar
- Errors due to variations in cement bulk density are eliminated
- A quarterly service is provided to check and calibrate weighing system

- Software ensures batch will not complete in event of exhausted hopper/silo/tank, reducing operator error and waste
- System complies with BSI and

QSRMC requirements

Sicoma Strength

Fully machined for perfection

Only **Sicoma** makes enough mixers to CNC machine the whole thing. Yes, both ends – a whole mixer on the machine turntable. You know what that means?

- No mountings warped while welding.
- True parallel mountings for bearings and gearboxes.
- Fast assembly without shims or awkward hand fitting; everything lines up.
- Lower wear, long reliable life, fewer shutdowns, easy to rebuild.
- Lowest lifetime cost.

Sicoma Strength wins every time. You can win too. Call us.

Only Sicoma assembles mixers on a production line, to give you the fastest delivery in the industry.

Sicoma makes over 2000 mixers per year, worldwide.
